

“Indigenous NT” PC Keyboard Layout

Roman Orthography - English (Canada)

This keyboard layout was developed to retain maximum standard (US ANSI) functionality while providing access through the [Alt](#) key to characters and diacritics used by official languages of the Northwest Territories.

This keyboard uses combining diacritical marks that are typed *after* the character which it modifies. [Shift](#) + [Alt](#) provides access to uppercase characters or alternative positioning and forms for some diacritics.
