## Notes

1. All keystrokes are based on the English “QWERTY” keyboard.
2. Phonetic characters work as indicated when used with Notepad and some other applications, but will only work with the MexTep (non-Unicode) versions of the SIL IPA93 fonts. They do not always work correctly with Word, and may need to be explicitly selected using CharMap (Insert symbol does not necessarily work).
3. To get a forward slash before an unaccented vowel, type *two* slashes before the vowel, e.g.:

//a → /a

4. To get a forward slash before an accented vowel, type *three* slashes before the vowel, e.g.:

///a → /á

5. Similarly for two or three hyphens, vertical lines, tildes or wedges *after* the symbol, e.g.:

b--	→	<b>b-</b>	b---	→	<b>ß-</b>
e	→	<b>e </b>	e	→	<b>ɛ </b>
e~~	→	<b>e~</b>	e~~~	→	<b>ə~</b>
c^^	→	<b>c^</b>	c^^^	→	<b>č^</b>
