Typing in Ge'ez

The Ge'ez keyboard (**ግ**) uses a system where the Ge'ez sounds are matched to the English letters (a style called "phonetic"). You can think of how a word sounds in Ge'ez and then type it out with English.

> Example: typing **selam** becomes **ሰላም**

Because Ge'ez has more sounds than English we sometimes have to adjust this rule. For example English does not have '**ጠ**' and the closest similar letter would be 't'. In this case you should type with "capital T":

> Example: typing **qTqaTie** becomes **ቅጥቃጤ**

Notice that we needed both "ie" together to make the 5th '**ጠ**' letter '**ጤ**'. When the letter you want to type does not appear when you hit the similar sounding key in English, try using the capital next. If typing the capital does not work, then try hitting the key two times:

> Example: typing **sselam** becomes **ሠላም**
> Example: typing **SSeHey** becomes **ፀሐይ**

Next, when you need to type the extra letters of Ge'ez like **ኊ, ሟ, ዀ** you can do so by typing an extra vowel after a 'u':

> Example: typing **mua** becomes **ሟ**
> Example: typing **guie** becomes **ጒ**

Finally, we must introduce a special rule for ' (apostrophe). Some words are spelt with a **ሳድስ** (6th) letter followed by a vowel, like **ርኤ** in **ገብርኤል**. We use the apostrophe here to type "gebr'iel" to make sure we get "**ርኤ**" instead of '**ሬ**'.

> Example: typing **mel'ak** becomes **መልአክ**
> Example: typing **m'eeraf** becomes **ምዕራፍ**

We also use the hash mark for English numbers, so #1 becomes 1 and so on. If a # is needed in your document just type # twice. This works for other punctuation as well, typing ';' once makes '፤' and a second time gives English ';'. The typing table shows how to type all Ge'ez letters, numbers and punctuation.

Typing all languages

Since the creation of the Unicode system for Ethiopic many letters have become available on the computer. Unicode defines 461 letters for Ethiopic writing in many languages. This is too many letters for Ge'ez so to avoid typing unexpected letters they are not allowed in the Ge'ez keyboard. However, on the occasion that you need to type Ethiopic letters outside of Ge'ez, you can do so with the "Unicode Keyboard".

There are two ways to start the Unicode keyboard:

1. Type Ctrl + Alt + Y   this should make the ꬠ icon appear in your task bar and the Unicode keyboard is ready.
2. Click on the 🔶 icon in your task bar then select the ꬠ icon and the Unicode keyboard is ready.

 The typing for letters of other languages are now shown:
