Using the Icetot (Ik) keyboard

The Icetot (Ik) keyboard uses the grave accent (`) and left and right bracket keys as *deadkeys*. The special characters required for typing Icetot are produced by typing one or more of the *deadkeys* before a letter to be modified, according to the following table. Only fonts specially modified for use with Icetot language (and the encoding of this keyboard) can be used with this keyboard.

key	` + key	[+ key	] + key	[` + key	]` + key
a		à	á
