This chart describes the keystrokes used in Tavultesoft Keyman with non-Unicode Cameroon Characters and the US (QWERTY) Keyboard.

Use the semicolon (;) for the Cam key and the colon (:) for the special (Spcl) key. Open the document but before typing select a font style from one of: Cam Cam SILDoulosL, Cam Cam SILSophiaL or Cam2 Cam2 SILManuscriptL. From the Keyman icon in the System Tray (bottom right of screen) select the Cameroon Keyboard. You can enter a tone marker by itself in the text by typing the desired tone followed by the plus (+) key.

When typing nasal or tone diacritics, the sequence is always:

Nasal (̦ ˜ ̣) + Tone (` ´ ˇ ˆ etc.) + Vowel.

Use the table below and to the side to find the code number for each character.

Diacritic	Graph	Type	over lower case	over upper case	over lower case i	over upper case I	over lower case m	over upper case M
low	`	’	0232	0200	0236	0204	0242	0210
high	´	[	0224	0192	0249	0217	0244	0212
falling	^	"	0234	0202	0238	0206
